

VHF FM TRANSCEIVER

TK-690H(B)

SERVICE MANUAL

REVISED

KENWOOD

© 2001-7 PRINTED IN JAPAN
B51-8460-10 (N) 1031

This service manual applies to products with 30500001 or subsequent serial numbers. (KCH-10 and KCH-11 are applicable to the productions June 2001 and after.)

In terms of the products with the serial numbers earlier than 30500001, refer to the TK-690H(B) service manual as per part No. B51-8460-00.

GENERAL

INTRODUCTION

SCOPE OF THIS MANUAL

This manual is intended for use by experienced technicians familiar with similar types of commercial grade communications equipment. It contains all required service information for the equipment and is current as of this publication date. Changes which may occur after publication are covered by either Service Bulletins or Manual Revisions, which are issued as required.

ORDERING REPLACEMENT PARTS

When ordering replacement parts or equipment information, the full part identification number should be included. This applies to all parts : components, kits, and chassis. If the part number is not known, include the chassis or kit number of which it is a part and a sufficient description of the required component, for proper identification.

PERSONNEL SAFETY

The following precautions are recommended for personnel safety :

- DO NOT transmit if someone is within two feet (0.6 meter) of the antenna.
- DO NOT transmit until all RF connectors are secure and any open connectors are properly terminated.
- SHUT OFF this equipment when near electrical blasting caps or while in an explosive atmosphere.
- All equipment should be properly grounded before power-up for safe operation.
- This equipment should be serviced by only qualified technicians.

GENERAL

PRE-INSTALLATION CONSIDERATIONS

1. UNPACKING

Unpack the radio from its shipping container and check for accessory items. If any item is missing, please contact KENWOOD immediately.

2. LICENSING REQUIREMENTS

Federal regulations require a station license for each radio installation (mobile or base) be obtained by the equipment owner. The licensee is responsible for ensuring transmitter power, frequency, and deviation are within the limits permitted by the station license.

Transmitter adjustments may be performed only by a licensed technician holding an FCC first, second or general class commercial radiotelephone operator's license. There is no license required to install or operate the radio.

3. PRE-INSTALLATION CHECKOUT

3-1. Introduction

Each radio is adjusted and tested before shipment. However, it is recommended that receiver and transmitter operation be checked for proper operation before installation.

3-2. Testing

The radio should be tested complete with all cabling and accessories as they will be connected in the final installation. Transmitter frequency, deviation, and power output should be checked, as should receiver sensitivity, squelch operation, and audio output. QT equipment operation should be verified.

4. PLANNING THE INSTALLATION

4-1. General

Inspect the vehicle and determine how and where the radio antenna and accessories will be mounted.

Plan cable runs for protection against pinching or crushing wiring, and radio installation to prevent overheating.

4-2. Antenna

The favored location for an antenna is in the center of a large, flat conductive area, usually at the roof center. The trunk lid is preferred, bond the trunk lid and vehicle chassis using ground straps to ensure the lid is at chassis ground.

4-3. Radio

The universal mount bracket allows the radio to be mounted in a variety of ways. Be sure the mounting surface is adequate to support the radio's weight. Allow sufficient space around the radio for air cooling. Position the radio close enough to the vehicle operator to permit easy access to the controls when driving.

4-4. DC Power and wiring

1. This radio may be installed in negative ground electrical systems only. Reverse polarity will cause the cable fuse to blow. Check the vehicle ground polarity before installation to prevent wasted time and effort.
2. Connect the positive power lead directly to the vehicle battery positive terminal. Connecting the Positive lead to any other positive voltage source in the vehicle is not recommended.
3. The cable provided with the radio is sufficient to handle the maximum radio current demand. If the cable must be extended, be sure the additional wire is sufficient for the current to be carried and length of the added lead.

5. INSTALLATION PLANNING – CONTROL STATIONS

5-1. Antenna system

Control station. The antenna system selection depends on many factors and is beyond the scope of this manual. Your KENWOOD dealer can help you select an antenna system that will best serve your particular needs.

5-2. Radio location

Select a convenient location for your control station radio which is as close as practical to the antenna cable entry point. Secondly, use your system's power supply (which supplies the voltage and current required for your system). Make sure sufficient air can flow around the radio and power supply to allow adequate cooling.

SERVICE

This radio is designed for easy servicing. Refer to the schematic diagrams, printed circuit board views, and alignment procedures contained in this manual.

TK-690H(B)

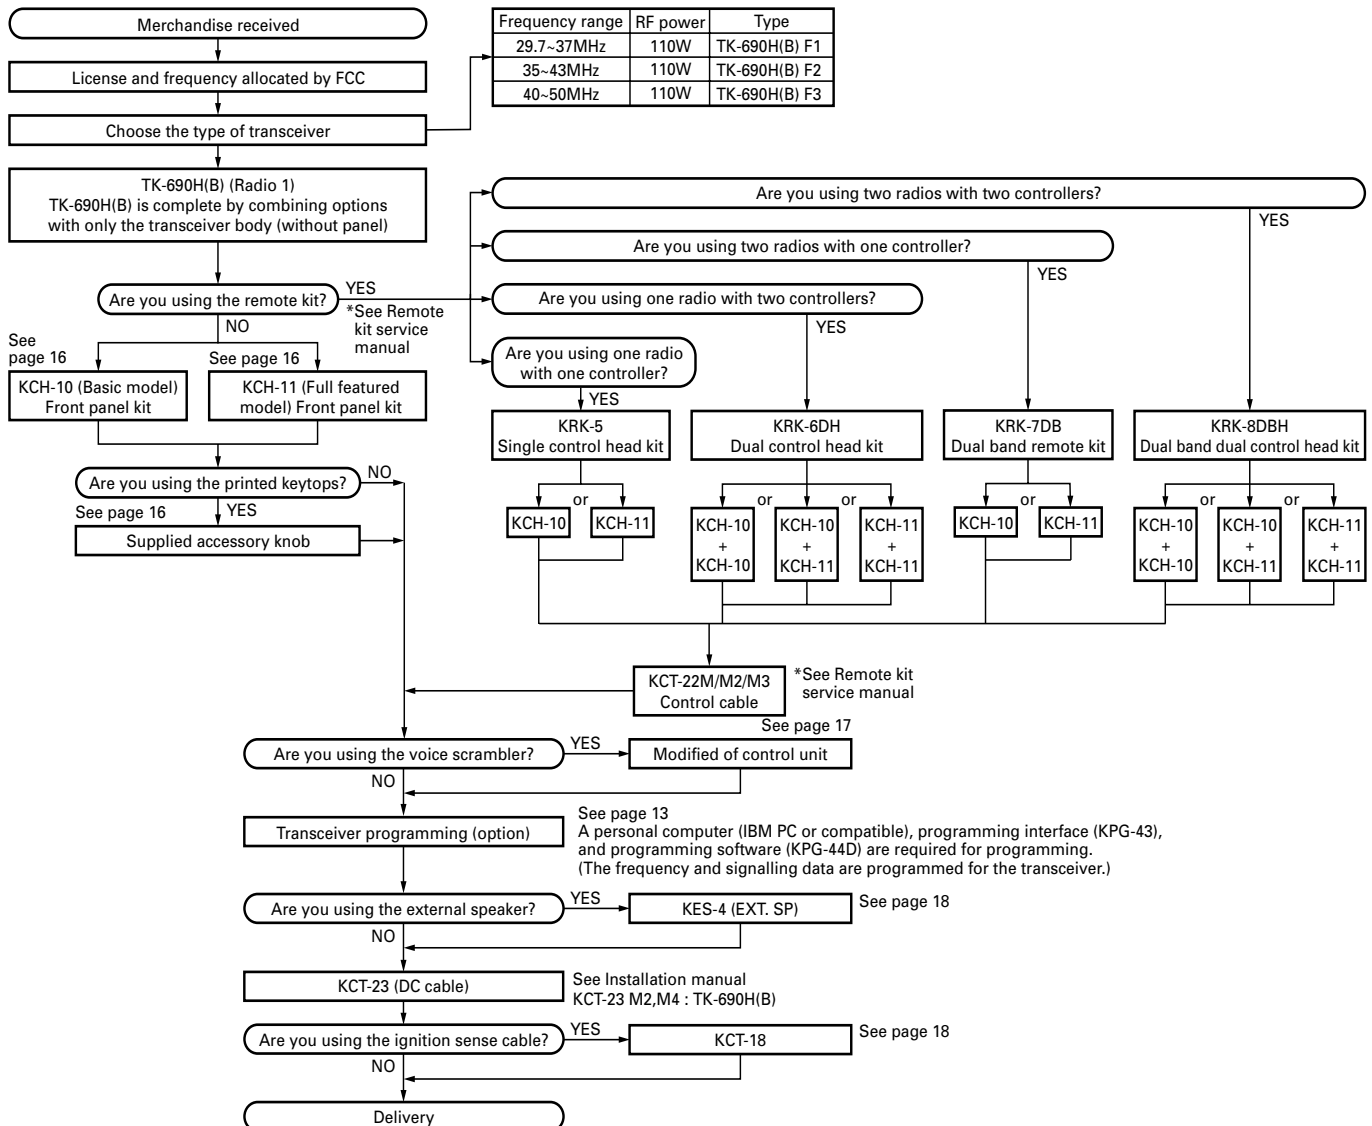

SYSTEM SET-UP

Before Reading About System Set-up

The TK-690H(B) is a transceiver main unit (without a panel or speaker) that you complete by adding options.

The options are classified into three types according to operation and function.

1. Install the front panel kit (controller) directly on a radio to operate it. (Form : Radio + KCH-10/11)
2. Remotely control one radio with one controller. (Form : Radio + KRK-5 + KCH-10/11 + KCT-22M/M2/M3)
3. Remotely control one radio with two controllers. (Form : Radio + KRK-6DH + KCH-10/11 (two) + KCT-22M/M2/M3 (two))
4. Remotely control two radios with one controller. (Form : Radios (two) + KRK-7DB + KCH-10/11 + KCT-22M/M2/M3)
5. Remotely control two radios with two controllers. (Form : Radio (two) + KRK-8DBH + KCH-10/11 (two) + KCT-22M/M2/M3 (two))

*Service manual parts No. list

Model	Parts No.
KRK-5/6DH	B51-8445-20
KRK-7DB/8DBH	B51-8452-00
	B51-8452-10

OPERATING FEATURES

1. Controls and Functions

1-1. Basic Function Panel

1-2. Full Function Panel

- (1) POWER Switch
Press to turn the power ON and OFF.
- (2) TX/BUSY Indicator
The TX Indicator (Red LED) shows that you are transmitting.
The BUSY Indicator (Green LED) shows that the channel is in use.
- (3) Microphone Connector
- (4) Volume Knob
To increase the volume level, turn clockwise (CW).
To decrease the volume level, turn counterclockwise (CCW).
- (5) UP/DOWN Knob
The function of this Knob can be programmed by the FPU.

Function	Description	Note
Channel UP/DOWN	Channel selector. To increase the channel, turn CW. To decrease the channel, turn CCW.	Default setting.
Group UP/DOWN	Group selector. To increase the group, turn CW. To decrease the group, turn CCW.	

- (6) GR UP Key, (7) GR DW Key, (8) MON Key, (9) SCN Key, (10)~(18) PF1-9 Key
The function of these Keys can be programmed by the FPU.

Function	Description	Note
[] : Key top name		
No Function	No function.	Default setting of PF1~9.
Monitor [MON]	If [MON] is pressed once while the RADIO is waiting for reception, all signalling* squelch is canceled. If [MON] is held down for 2 seconds, noise squelch is canceled and the audio is unmuted.	Default setting of MON. (Full function panel) all signalling; QT/DQT & 2 TONE/DTMF
Scan [SCN]	Start and stop the scanning sequence.	Default setting of SCN. (Full function panel)
Public Address [PA]	The RADIO works as a PUBLIC ADDRESS amplifier.	
Horn Alert [HA]	When the RADIO receives a the optional signalling calls that are assigned to the channel, the HA relay turns on.	
Talk Around [TA]	Use this function to communicate with other operators directry, without using a repeater.	
Intercom [IC]	Use this function to communicate between the HEAD1 and HEAD2 operator without transmitting.	Dual HEAD configuration only.

OPERATING FEATURES

Function [] : Key top name	Description	Note
Channel Name [AN]	Switches the display between Group-Channel No. and Group channel name.	
Speaker Internal/ External [SP]	Switch the audio output between Internal speaker and PA speaker.	
Delete/ Add [D/A]	Changes the Scan DELETE/ADD setting of each channel or group.	Press and hold [D/A] for more than 2 seconds to toggle a Group DEL and ADD.
Squelch Level [SQL]	Press to enter Squelch Level Adjust Mode. The Squelch level can be adjusted by using the UP/DOWN Knob, or the preprogrammed channel Up/Down key or Group Up/Down key.	
Operator Selectable Tone [OST]	Select signalling from the pre-programmed QT/DQT list.	
Scrambler [OPT]	The optional board on and off.	Install the Scrambler board.
AUX A [AUXA]	Turns AUX A port on and off.	
AUX B [AUXB]	Turns AUX B port on and off.	
AUX C [AUXC]	Turns AUX C port on and off.	
Home Channel (Fixed) [HC]	Switches to the pre-programmed Home Channel.	
Home Channel (Toggle) [HC]	When pressed once, switches to the Home Channel. Press again to returns to the previous channel.	
CH1 Direct [CH1]	Switches to the GR1-CH1 directry.	
CH2 Direct [CH2]	Switches to the GR1-CH2 directry.	
CH3 Direct [CH3]	Switches to the GR1-CH3 directry.	
CH4 Direct [CH4]	Switches to the GR1-CH4 directry.	
CH5 Direct [CH5]	Switches to the GR1-CH5 directry.	
Channel Recall [RCL]	When pressed once, switches to the last called channel. Press again to return to the previous channel.	The [RCL] Key works in Scan Mode only.
Dimmer [DIM]	Use this function to adjust the LCD backlight brightness, Key backlight, TX/BUSY LED, and DTMF Mic Key backlight ON/OFF.	

Function [] : Key top name	Description	Note
Speaker 1-2 Mute [SPM]	Each speaker audio can be manually disabled from the other control head.	Dual HEAD configuration only.
Channel UP [^]	If [^] is pressed once, the channel increases by one step. If [^] is held down for 1 second, the channel increases continuously.	
Channel DOWN [v]	If [v] is pressed once, the channel decreases by one step. If [v] is held down for 1 second, the channel decreases continuously.	
Group UP [^]	If [^] is pressed once, the group increases by one step. If [^] is held down for 1 second, the group increases continuously.	
Group DOWN [v]	If [v] is pressed once, the group decreases by one step. If [v] is held down for 1 second, the group decreases continuously.	
Mobile Relay Station [RPT]	The RADIO works as a repeater.	Dual BAND configuration only.
Emergency Call [EMG]	To start an Emergency Call, press [EMG].	This function needs the ANI board.

(19) LCD Display

	Description	Note
(20) CALL	Flashes when the RADIO is called by proper Optional Signalling (DTMF or 2Tone).	If Signalling has been set "AND", CALL lights after transmitting.
(21) MON	Lights when [MON] is pressed. Signalling squelch is disabled.	
(22) SCN	Indicates when scan mode is enabled.	
(23) SP	Lights when "PA speaker" is selected for audio output.	
(24) OPT	Lights when the optional board*, that is installed inside the RADIO, is enabled.	Optional Board : - Scrambler
(25) A	Lights when [AUXA] is pressed. The PF Port that is programmed with "AUX A" is ON.	
(26) B	Lights when [AUXB] is pressed. The PF Port that is programmed with "AUX B" is ON.	

OPERATING FEATURES

	Description	Note
(27) C	Lights when [AUXC] is pressed. The PF Port that is programmed with "AUX C" is ON.	
(28) OST	Lights when [OST] is pressed, Operator Selectable Tone is enabled.	
(29) ▼ (Group Add Status)	If the selected group is in the multi group scan sequence, the indicator appears at the group.	
(30) ▼ (Channel Add Status)	If the selected channel is in the scan sequence, the indicator appears at the channel.	
(31) • BASIC FUNCTION PANEL 7 SEGMENT display • FULL FUNCTION PANEL DOT MATRIX (S) display	Displays the channel status. P1 : Lights when a PRIORITY 1 channel is shown on the display. P2 : Lights when a PRIORITY 2 channel is shown on the display. PP : Lights when a PRIORITY 1 & 2 channel is shown on the display. HC : Lights when a Home Channel is selected by [HC] key. TA : Lights when the RADIO is in Talk Around mode. RCL : Lights when recall channel is selected by [RCL] key. R1-R15 : Lights when remote channel is selected by PF port.	
(32) • BASIC FUNCTION PANEL 13 SEGMENT display • FULL FUNCTION PANEL DOT MATRIX (L) display	Displays the operating Group-Channel number (Channel display), or name (Alphanumeric display) programmed by the FPU. Also displays the status of some features.	

1-3. Microphone

Press PTT (Push To Talk) to transmit, then speak into the microphone.

2. Receive

- (1) To turn on the RADIO:
Press the Power Switch. The display and graphics illuminate to indicate the RADIO is ON.
- (2) To adjust the volume level:
Turn the Volume Knob CW to increase the volume level.
Turn the Volume Knob CCW to decrease the volume level.
- (3) To select a Group:
Select a Group by rotating the UP/DOWN Knob which has been programmed with "Group UP/DOWN" or by pressing the Keys which have been programmed with "Group UP" and "Group DOWN".
If the "Channel Tracking Function" is enabled, the channel number will not change.
- (4) To Select a Channel:
Select a Channel by rotating the UP/DOWN Knob which has been programmed with "Channel UP/DOWN" or by pressing the keys which have been programmed with "Channel UP" and "Channel DOWN".
- (5) To enter carrier squelch mode:
If you want to monitor a channel, press [MON] Key. If the "OFF HOOK Decode" function has been disabled, you can also enter monitor mode by taking the microphone off HOOK.

3. Transmit

- (1) Normal ON HOOK Scan Mode
First, lift the microphone from the HOOK. The scanning stops temporarily and the OFF HOOK revert channel is displayed. Listen for a few seconds to make certain the channel is not being used.
OFF HOOK Scan MODE
If scanning, pressing the PTT switch will stop the RADIO on the OFF HOOK revert channel and begin transmission immediately.
Not Scan Mode
Pressing PTT starts transmission at the selected channel.
- (2) Press PTT and start speaking. For best results, hold the microphone 1 to 1.5 inches from your mouth. Release PTT when your message is complete. Listen for a response.
- (3) When your conversation is finished, replace the microphone on its hook.

4. Scan Operation

4-1. General

There are two "Mic HOOK" scan modes in which the RADIO can be programmed to operate.

- ON HOOK Scan
Normal method of scanning that requires the microphone to be ON HOOK (hanged on the Mic Hanger) to initiate scan.
- OFF HOOK Scan
The microphone does not have to be ON HOOK to initiate scan or to scan channels.

OPERATING FEATURES

- (1) The scan feature is initiated by pressing the [SCN] Key.
- (2) A single confirmation tone sounds, and scanning starts. If there is only one or no added channels, an error tone will sound and scanning will not start.
- (3) The display shows "SCN" icon, and "SCAN" or the OFF HOOK Revert Channel Number (FPU setting).
- (4) If the RADIO receives a proper signal while scanning, scanning stops temporarily, audio is unmuted, and the channel number or name is displayed.
If either "Priority1" or "Priority2" is programmed and scanning stops at a Normal Channel by receiving a signal, the RADIO watches for a signal on the Priority Channel periodically. When a signal exists on the Priority Channel, the channel will change from the Normal Channel to Priority Channel.
If both "Priority1" and "Priority2" are programmed and scanning stops at the Priority2 Channel by receiving a signal, the RADIO watches a signal on the Priority1 Channel periodically. When a signal exists on the Priority1 Channel, the channel will change from the Priority2 Channel to the Priority1 Channel.
If there is no Priority Channel programmed, the scanning stops at a channel and receives only that channel.
- (5) If the [SCN] Key pressed again, Scan Mode ends at the revert channel, and two confirmation tones sound.

4-2. To Delete Undesired Channels

To temporarily delete undesirable channels, press [D/A] Key while the channel is displayed, and scanning resumes. (To temporarily delete Priority Channel 1 or 2, set the "Priority Temporary D/A" function to "YES".)

You can't delete a channel in Scan Mode under the following conditions:

- Priority Scan
There is only channel beside the Priority Channel in the scan sequence.
- Non-priority Scan
There are only 2 channels in the scan sequence. To restore the original scan sequence, either turn scan off and on or turn the RADIO off and on.

4-3. To Enter Carrier Squelch Scan While Scan is On

If you have pressed the [MON] Key, the MON indicator is turned on and the RADIO operates in carrier squelch scan.

5. Adding Channels and Groups to the Scan Sequence

- (1) Channels
To add the currently displayed channel to the scan sequence, press [D/A] Key. The CH ADD indicator (▼) lights, and the channel is added to the scan sequence.
- (2) Groups
To add the currently displayed group of channels to the scan sequence, hold down the [D/A] Key for 2 seconds. The GR ADD indicator (▼) lights, and the group is added to the scan sequence.

6. Deleting Channels and Groups from the Scan Sequence

- (1) Channels
To delete a channel from the scan sequence press [D/A] Key. The CH ADD indicator (▼) goes off, and the channel is deleted from the scan sequence.
- (2) Groups
To delete the currently displayed group of channels from the scan sequence, hold down [D/A] Key for 2 seconds. The GR ADD indicator (▼) goes off, and all the channels in the group are deleted from the multi group scan sequence.

7. Operator Selectable Priority

- (1) Operator Selectable Priority1
If Priority1 has been set to "Operator Selectable", you can set the currently displayed channel as Priority1. To set the currently displayed channel as Priority1, hold down the [SCN] Key and press the [MON] Key three times.
- (2) Operator Selectable Priority2
If Priority2 has been set to "Operator Selectable" you can set the currently displayed channel as Priority2. To set the currently displayed channel as Priority2, hold down the [SCN] Key and press the [MON] Key twice.

8. Talk Around (TA)

Talk Around is useful when you are close to other mobiles you want to talk to, or are outside the range of your repeater system.

Press the [TA] Key. A confirmation tone sounds, and "TA" (BASIC Panel : 7 segment, FULL Panel : DOT MATRIX (S)) is displayed. You can communicate without using a repeater.

To use a repeater, press [TA] again. A confirmation tone sounds, and "TA" goes off.

9. Horn Alert (HA)

If you are called from the base station using 2Tone/DTMF while you are away from your transceiver, you will be alerted by the vehicle horn or some other type of external alert. To turn the horn alert function on, press the [HA] Key. A confirmation tone sounds, and the display shows HORN ALERT (or HA).

If [HA] is pressed again, the horn alert function is turned off.

OPERATING FEATURES

10. Public Address (PA)

Public Address amplifies the microphone audio, and outputs it through a PA speaker. PA is activated by pressing the [PA] Key. A confirmation tone sounds, and the display shows PUBLIC ADDRESS (or PA). PA can be activated at anytime (scanning or non-scanning).

The RADIO continues to scan & receive calls while in PA mode. Pressing PTT activates PA, and will override an incoming call at anytime ; however, no RADIO transmission takes place. If [PA] is pressed again, a confirmation tone will sound, the display will return to the normal channel or SCAN display, and the PA function will turn off.

11. Speaker Internal/External (SP)

SP amplifies the received audio from the RADIO and outputs it through a PA speaker. SP is activated by pressing the [SP] Key. A confirmation tone sounds and the SP icon is displayed. SP can be activated at anytime (scanning or non-scanning).

The RADIO transmits and operates normally while SP is activated, but all received calls will be output through the PA speaker. If [SP] is pressed again, a confirmation tone sounds, the SP icon goes off and the SP function will turn off.

12. Channel Name (AN)

This function switches the 13-segment display (BASIC Panel) or DOT MATRIX (L) display (FULL Panel) between alphanumeric and Group-Channel number.

If you want to change from alphanumeric display to channel display, press [AN] Key. A confirmation tone sounds, and the alphanumeric display changes to the channel display.

If [AN] is pressed again, a confirmation tone sounds, and the channel display changes back to the alphanumeric display.

13. Intercom (IC) ; Dual Head Configuration only

Intercom (IC) allows one control head operator to talk to the another control head operator. IC mode is activated by pressing the [IC] Key. A confirmation tone sounds and the display shows INTERCOM. IC can be activated at anytime (scanning or non-scanning).

The RADIO continues to scan & receive calls while in IC mode. Pressing PTT activates IC and will override an incoming call at anytime ; however, no RADIO transmission takes place. If [IC] is pressed again, a confirmation tone sounds, the display returns to the normal channel or SCAN display, and the IC function will turn off.

14. Home Channel (HC)

This feature allows the radio operator to immediately select a pre-determined "Home Channel" by pressing the [HC] Key. HC can be activated as follows.

	CASE1 : HC has been set as "HC (Fixed)"		
	Non-Scan Mode	Scanning	Scan temporary stopping
press [HC] once	Change to Home Channel		
press [HC] again	No effect		
	CASE2 : HC has been set as "HC (Toggle)"		
	Non-Scan Mode	Scanning	Scan temporary stopping
press [HC] once	Change to Home Channel		
press [HC] again	Return to current channel	Change to Revert Channel	Return to current channel

15. Squelch Level (SQL)

This function allows the radio operator to manually adjust the squelch threshold in 16 steps (Level 0~15) via the front panel controls. To adjust the squelch level:

- (1) Press the [SQL] Key. A confirmation tone sounds, and the RADIO enters Squelch Level Adjust Mode. In this mode, all signalings are canceled and audio is unmuted. The display shows SQUELCH XX (or SQL XX). (XX= squelch level)
- (2) Change the squelch level by pressing [^] and [v] Keys, or rotating the UP/DOWN Knob.
- (3) Press [SQL] again. A confirmation tone sounds, the display returns to the normal channel, the level setting is memorized, and Squelch Level Adjust Mode will turn off.

* This feature can be initiated when the RADIO is not in scanning mode.

16. Operator Selectable Tone (OST)

This function allows the radio operator to change the pre-set decode QT/DQT, encode QT/DQT. You can select Dec/Enc OFF or from up to 16 decode/encode pairs (Pair No. 1~16) programmed by the FPU. To select the Dec/Enc pairs:

- (1) Press the [OST] Key. A confirmation tone sounds, and the display shows the OST Name which is memorized in the channel for 2 seconds. The "OST" icon lights, and OST is enabled.
Press [OST] again, and the OST icon goes off and OST is disabled.
- (2) When the [OST] Key is held down, a confirmation tone sounds and the RADIO enters OST Select Mode.
- (3) Select the Dec/Enc pair by pressing the [^] and [v] Keys, or rotating the UP/DOWN Knob. The display shows TONE XX (XX=Dec/Enc pair number) or the OST Name.
- (4) Press [OST] again, a confirmation tone sounds, the display returns to the normal channel, the pair is memorized and OST Mode will turn off.

* You can select a Dec/Enc pair on each channel.

OPERATING FEATURES

17. Option Board (OPT)

If an optional Scrambler board has been installed in the RADIO, Scrambler is activated by pressing the [OPT] Key. A confirmation tone sounds, and the OPT icon is displayed. If [OPT] is pressed again, a confirmation tone sounds, the OPT icon goes off and the Scrambler will turn off.

If [OPT] is held down, the RADIO enters SCR Code Set Mode. A confirmation tone sounds, and the display shows CODE XX (XX=SCR Code). Change the SCR Code by pressing the [^] and [v] Keys, or rotating the UP/DOWN Knob.

Press [OPT] again, a confirmation tone sounds, the display returns to channel (SCR is ON), the SCR Code setting is memorized, then SCR Code Set Mode will turn off.

18. AUX A, AUX B, AUX C

This function switches the accessory PF Output ports which have been programmed with AUX A, AUX B and AUX C.

Press [AUXA] Key. A confirmation tone sounds, the A icon is displayed, and the AUX A Port is switched on (Low level). If [AUXA] is pressed again, a confirmation tone sounds, the A icon goes off and the AUX A Port is switched off (open collector).

In the same way, [AUXB] Key controls the AUX B Port, and [AUXC] Key controls the AUX C Port.

19. Direct Channel Access

This feature allows the radio operator to immediately select CHANNELs 1~5 which are contained in GROUP 1. To select GR1-CH1, press [CH1]. To select GR1-CH2~5, press [CH2] ~ [CH5],

20. Channel Recall (RCL)

This feature is enabled in scan mode.

This feature allows the radio operator to immediately access the last called (Unmuted) channel by pressing [RCL]. The 3-digit display shows "RCL". Press [RCL] again, and the radio returns to the previous channel.

21. Dimmer (DIM)

To adjust the brightness of the display backlight, TX/BUSY LED, panel Keys backlight and microphone keys backlight, press the [DIM] Key.

[DIM] controls the brightness at the same time as follows.

	Display backlight	TX/BUSY LED	Panel Keys backlight	Microphone Keys backlight
Default	High	High	High	High
Press [DIM] once	Medium	↓	↓	↓
Press again	Low	↓	↓	↓
Press again	OFF	OFF	OFF	OFF
Press again	return to High	return to High	return to High	return to High

* The brightness setting is memorized.

22. Speaker 1-2 Mute (SPM)

; Dual Head Configuration only

This feature allows the radio operator to manually disable the speaker audio of another control head.

Press the [SPM] Key, a confirmation tone sounds, and the other head speaker is muted. Both head displays shows X MUTE (X=Muted HEAD number).

This muted condition is canceled by both head keys without PTT and Mic HOOK which is connected to Un-muted head.

23. Mobile Relay Station (RPT)

; Dual Band Configuration only

This function allows the radio operator to use the RADIO as a repeater.

- (1) Both "Repeater Channel 1" and "Repeater Channel 2" must be pre-programmed by the FPU. Each channels must be on different bands.
- (2) Press the [RPT] Key, then both the VHF and UHF units move to the repeater channel, and enter Repeater mode. Displays of both heads show "REPEATER".
- (3) If one unit receives a proper signal, the other unit will start transmitting (repeating).
- (4) If the signal stops, the repeat action will stop. If one of the units detects another signal, the repeat action will restart.
- (5) Press [RPT] again, both units return to their previous channels, and exit the Repeater mode. However, during the repeating mode, pressing [RPT] has no effect.

24. Emergency Call (EMG)

If the [EMG] Key is held down, the RADIO enters the Emergency Mode. In the Emergency Mode, the channel changes to the "Emergency Channel (set by the FPU)" internally. The display depends on "Emergency Channel Display" setting, and the Emergency Call (None, DTMF, MSK or ANI board) is transmitted.

If "ANI Board" is selected for the Emergency Type, turn the transceiver off, then turn it on again to recover "Normal Mode".

If "ANI Board" is not selected for the Emergency Type, press and hold [EMG] key to recover "Normal Mode".

OPERATING FEATURES

25. Busy Channel Lockout (BCL), BCL Override

The Busy Channel Lockout function prevents interference with other stations that may be using the same channel.

While the selected channel is in use, pressing PTT causes the RADIO to sound a warning tone, and transmission is inhibited. To stop the warning tone, release PTT.

If BCL Override has been enabled, pressing PTT within 500msec again will cancel BCL, and transmission is enabled.

26. 2TONE Signalling

2Tone signalling opens the squelch only when the RADIO receives a proper 2Tone code that is the same as the pre-programmed 2Tone for the channel. When the RADIO receives a 2Tone code, the CALL icon flashes.

If Transpond has been programmed, the RADIO will return an acknowledgment signal automatically after receiving the 2Tone code.

If Call Alert has been programmed, an Alert Tone sounds after receiving a 2Tone code. You can configure "Normal" (an alert tone beeps once) or "Continuous" (an alert tone beeps every 5 seconds) for the Call Alert. Unmute condition is canceled and the CALL icon goes off when ; (1) pressing the [MON] Key, (2) hanging the microphone on its hook, (3) muting continues for 10 seconds. (If "Auto Reset" has been programmed)

27. DTMF Signalling

DTMF Signalling opens the squelch only when the RADIO receives a proper DTMF code that is the same as the pre-programmed "Primary Code (Individual ; 1~7digits)" or "Secondary Code (Group ; 1~7digits)". When the RADIO receives a correct code, the CALL icon flashes.

If Transpond has been programmed, the RADIO will return an acknowledgment signal automatically after receiving the DTMF code.

If Call Alert has been programmed, an Alert Tone sounds after receiving a DTMF code. You can configure "Normal" (an alert tone beeps once) or "Continuous" (an alert tone beeps every 5 seconds) for the Call Alert. Unmute condition is canceled and the CALL icon goes off when ; (1) pressing the [MON] Key, (2) hanging the microphone on its hook, (3) muting continues for 10 seconds (If "Auto Reset" has been programmed), and (4) receiving reset code. (Primary code + "#" or secondary code + "#")

28. Time Out Timer

(Possible to configure to each group)

The Time Out Timer function interrupts continuous transmission after a specified time elapses.

Holding down PTT for longer than the programmed time causes the RADIO to stop transmitting and sound a warning tone. To stop the warning tone, release PTT.

29. Signalling AND/OR

(Possible to configure to each group)

The RADIO will be unmuted with a combination of QT/DQT and 2Tone/DTMF. The AND/OR setting works as follows.

29-1. AND

The audio is unmuted when the RADIO receives the correct QT/DQT and 2Tone/DTMF. After transmitting, 2Tone/DTMF will be canceled.

29-2. OR

The audio is unmuted when the RADIO receives the correct QT/DQT. 2Tone/DTMF is used just as an individual call or group call.

30. Off Hook Decode

If the OFF HOOK Decode function has been enabled, removing and replacing the microphone on the HOOK has no effect for decoding QT/DQT and 2Tone/DTMF.

31. TX Audio Monitor

; Dual Head Configuration only

This function allows the radio operator to hear another operator's voice which is transmitted through another control head.

If the TX Audio Monitor function is set to "w/Talk Interrupt" and one operator is transmitting, the other operator's control head displays "INTERCOM" and he/she can speak to the transmitting control head by pressing PTT.

32. Roll Over/Dead End

32-1. Roll Over

When [^] (CH UP) is pressed, or the CH UP/DOWN Knob is turned CW from the Maximum channel, the channel changes to the Minimum channel.

When [v] (CH DOWN) is pressed, or the CH UP/DOWN Knob is turned CCW from the Minimum channel, the channel changes to the Maximum channel.

32-2. Dead End

When [^] (GR UP) is pressed, or the GR UP/DOWN Knob is turned CW from the Maximum group, the group doesn't change.

When [^] (CH UP) is pressed, or the CH UP/DOWN Knob is turned CW from the Maximum channel, the channel doesn't change.

When [v] (GR DOWN) is pressed, or the GR UP/DOWN Knob is turned CCW from the Minimum group, the group doesn't change.

When [v] (CH DOWN) is pressed, or the CH UP/DOWN Knob is turned CCW from the Minimum channel, the channel doesn't change.

OPERATING FEATURES

33. Minimum Volume

When the Volume Knob is adjusted fully counterclockwise, the audio level is set to the Minimum Volume level which is programmed by the FPU.

34. Dead Beat Disable (DBD)

If the RADIO receives a DBD Code (1~7digits), the RADIO returns an acknowledgment signal automatically, and transmission is disabled. This TX INHIBIT condition is memorized.

If the RADIO receives a DBD Reset Code (DBD Code + #), the RADIO returns an acknowledgment signal automatically, and transmission is Enabled.

35. ANI Board

The ANI board contains functions which you can use. To use the function, you select that function on the ANI board.

36. Accessory Programmable Function Port (PF Port)

The RADIO has 13 PF Ports.

HEAD (12 pin) : PF Input Port 2, PF Output Port 2

DECK (Dsub 25 pin) : PF Input Port 5, PF Output Port 4

Each Port can be programmed with a function from next Table.

36-1. PF Input Port

External HOOK	Open → OFF HOOK, Low → ON HOOK
CH Select A	The Channel changes to Remote Channel
CH Select B	1~15. If CH Select A~D are set "H" or "Open", the channel is selected by using the [^]/[v] keys or UP/DOWN Knob. (User Channel)
CH Select C	
CH Select D	
External PTT	Open → PTT OFF, Low → PTT ON
Scan	Open → Scan OFF, Low → Scan ON
Home Channel	Open → Current Channel, Low → Home Channel
Light Sense	Open → LCD Backlight is controlled by [DIM], Low → LCD Backlight is set "Low"
Repeater SW	Open → Repeater inactive, Low → Repeater Active * Dual BAND configuration only
External Monitor	Open → Monitor OFF, Low → Monitor ON

36-2. PF Output Port

AUX A	Pressing [AUXA] once → Low, Pressing [A] [AUXA] again → OPEN-COLLECTOR
AUX B	Pressing [AUXB] once → Low, Pressing [B] [AUXB] again → OPEN-COLLECTOR
AUX C	Pressing [AUXC] once → Low, Pressing [C] [AUXC] again → OPEN-COLLECTOR
TOR	Receiving correct QT/DQT → Low, Not receiving correct QT/DQT → OPEN-COLLECTOR
COR	BUSY → Low, Not BUSY → OPEN-COLLECTOR

37. Timed Power Off

This function works as "Automatic Power Switch Off".

Timed Power Off timer starts from the ignition-off. After the timer expires, the RADIO will automatically turn off. The timer will be reset if the ignition is turned on and off.

This function requires ignition-sense. Connect the ignition-line to the 9-pin connector which is located at the rear of the RADIO.

After the timer expires, you can turn the transceiver on again with 2 methods below.

- 1) Timed power off function (Default)
Press the power switch.
- 2) Ignition function & Timed power off function
Turn the ignition on.

38. Emergency

- **Active tone**
Automatic transmission period in the emergency mode.
- **Interval Time**
Interval time between the automatic transmissions.
- **Duration of Locator Tone 1**
Duration of an alert tone before the automatic transmission is performed.
- **Duration of Locator Tone 2**
Duration of an alert tone after the automatic transmission is performed.
- **Emergency Channel Display**
Setting for the display in the emergency mode.
The transceiver can be programmed to display "EMERGENCY" channel name when it is in emergency mode.
If you set to "off" by KPG-44D the transceiver shows selected group/channel/status before entering to the emergency mode however the transceiver is in an emergency mode.

OPERATING FEATURES

- **Emergency Mode Type**

Speaker mute on or off in the emergency mode.

- **Emergency Type**

Select an Emergency code format from DTMF, MSK, ANI board or OFF (Disabled).

- **Emergency DTMF ID**

The emergency DTMF ID code when you select DTMF in the emergency type.

- **Emergency Call Fleet**

The emergency fleet number when you select MSK in the emergency type.

- **Emergency Call ID**

The ID number when you select MSK in the above emergency type.

39. MSK PTT ID

- **Side Tone**

A tone to notify the voice transmission is allowed after sending the MSK PTT ID (Connect ID).

- **Fleet (Own)**

- **ID (Own)**

Configure the Fleet/ID of the MSK PTT ID (Fleet Sync Format).

- **Data TX Mod. Delay**

Delay time of transmitting the MSK ID after the transceiver enters the transmission mode.

40. Power On Text

To display the Power on text for approximately 2 seconds when the transceiver is turned on.

41. Data Programming (PC Mode)

41-1. Preparation and Connection

TK-690H transceiver is programmed by using a personal computer, programming interface cable KPG-43, and programming software KPG-44D.

The programming software can be used with an IBM-PC or compatible machine. Figure 1 shows the setup for programming.

41-2. Programming Interface Cable KPG-43 Description

The KPG-43 is required to interface TK-690H to the computer. It has a circuit in its D-sub 25 pin connector case that converts RS-232C logic level to TTL level.

KPG-43 is used to connect between TK-690H microphone connector and RS-232C serial port of computer.

41-3. Programming Software KPG-44D Description

KPG-44D is the programming software for TK-690H supplied on a 3.5" floppy disk. This software runs under MS-DOS version 3.1 or later on an IBM-PC/XT, AT, or PS2 or compatible machine.

The data can be input to or read from TK-690H and edited on the screen. The programmed or edited data can be printed out. It is also possible to tune the transceiver.

We recommend that install KPG-44D for example to harddisk first then use it.

KPG-44D instruction manual part No. : B62-1011-XX.

Fig. 1

42. Mode

OPERATING FEATURES

Mode	Function
User mode	Customer use this mode
PC mode	Communication between the radio and PC (IBM compatible). It requires the KPG-44D.
Panel test mode (Refer to ADJUSTMENT)	Dealer uses to check the fundamental characteristics.
Panel tune mode (Refer to ADJUSTMENT)	Dealer uses to tune the radio.
Clone mode	Programmed data is transferred from one transceiver to another by using a cloning cable.
Firmware programming mode	Re-write the firmware of the flash ROM. Note : When programming the firmware, it is best to copy the data from the floppy disk to your hard disk, then from the hard disk to the CPU. Directly copying from the floppy disk to the CPU may not work because the access speed is too slow.

42-1. How to Enter Each Mode

Mode	Operation
User mode	Power on
PC mode	Connect the PC and turn the power on. Then the radio can be controlled by the FPU.
Panel test mode	Hold down the [PF1] key, turn the radio power on.
Panel tune mode	Press the [GR ^] key from the panel test mode.
Clone mode	Hold down the [PF5] key, turn the radio power on.
Firmware programming mode	Hold down the [PF2] key, turn the radio power on.

43. PC Tuning Mode

When making adjustment while in PC tuning mode, modify the KPG-43 programming interface cable as described below.

1. Remove the two screws from the plug cover, then lift the cover from the plug.

2. Solder the lead wire onto the MIC tab on the PCB, and the ground wire onto the ME tab.

3. Create a hole in the casing (as shown in the illustration) then fit the cable into the hole. Replace the cover and secure it using the two screws.

OPERATING FEATURES

44. Clone Modes

There are two clone modes : "All Clone Mode", in which all data programmed in one transceiver with the "FPU" is copied to another transceiver, and "Group Clone Mode", in which group data in one transceiver is copied to a group in another transceiver.

The cloning operation is performed from the master side transceiver.

44-1. To Enter the Clone Mode and Connect Transceivers

- Hold down the [PF5] key and turn on the power switch on the master side transceiver.
Turn on the power switch on the slave side transceiver as usual.
- Connect the master and slave side transceivers with a cloning cable.

44-2. All Clone

- Enter the All Clone Mode from the clone mode with the [Up/down] knob.
- Press the [PF5] key to start cloning.

44-3. Group Clone

- Enter the group clone mode from the clone mode with [Up/Down] knob.
- Press the [PF5] key to enter the master group select mode. Select the master group with [Up/Down] knob.

- Press the [PF5] key to enter the slave group select mode. Select the slave group with [Up/Down] knob.
- Press the [PF5] key to start cloning.

Note : The transceiver does not enter the clone mode if it is disabled with the FPU. To clone the transceiver both transceivers must be same. If the panels, frequency ranges, optional board are different, they cannot be cloned.

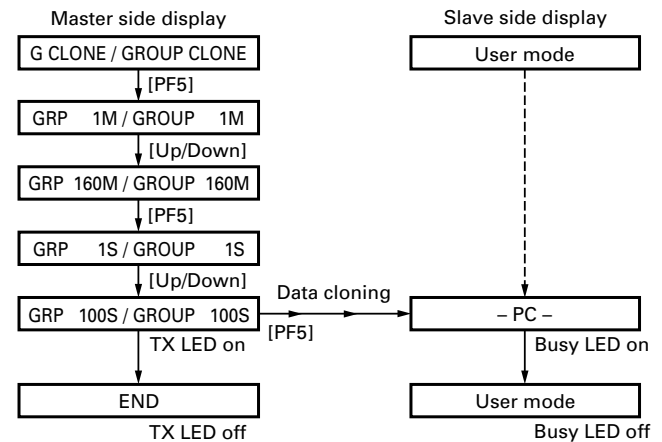

Fig. 2

TK-690H(B)

INSTALLATION

1. Contents

- Front panel kit (KCH-10, KCH-11)
Description and use of the knob supplied with the KCH-10/11
- Optional voice scrambler function
Voice scrambler use and connection
- Optional ANI function
ANI board connection
- Ignition sense cable (KCT-18)
Description of the ignition function and timed power off function and connection
- External speaker (KES-4)
KES-4 connection method and modification for increasing the speaker output of the control head
- Horn alert function
Modification for changing the function of the ACC terminal for horn alert
- Accessory terminal function
Description and use of D-SUB 25-pin ACC terminals, "MI/DI" and "SB"
- Connection with remote kit
Modification of the radio to use KRK-5, KRK-6DH, KRK-7DB, or KRK-8DBH

2. Front Panel Kit (KCH-10, KCH-11)

2-2. Connection with TK-690H(B)

1. Remove the upper and lower halves of the case of the TK-690H(B).
2. Connect the lead (W501) with a connector of the control unit (X57-560 B/2) to CN1 of the KCH-10 or KCH-11.
3. Install the KCH-10 or KCH-11 on the radio using the screws (N32-3006-46) (❶) supplied with the front panel kit. Take care not to get the lead between the KCH-10 or KCH-11 and an edge of the case. (You can install the panel upside down if necessary to install the radio.)
4. Reinstall the upper and lower halves of the case.
5. Connection the short plug for the accessory connector (9-pins) on the rear of the radio.

Fig. 1

2-3. Install the accessory knobs

When a function is set by the programming software (KPG-44D), the key legend can be changed by inserting the accessory knobs into PF1 to PF9 of the KCH-11 (PF1 to PF5 : KCH-10). The accessory contains a set of 30 knobs : AN, D/A, DIM, HA, HC, IC, MON, OPT, OST, PA, RCL, RPT, SCN, SP, SPM, SQ, TA, ^, v, CH1, CH2, CH3, CH4, CH5, AUX A, AUX B, AUX C, EMG, and blank.

Fig. 2

No.	K29-5276-*3	K29-5277-*3	K29-5305-*3
1	AN	RCL	CH1
2	D/A	RPT	CH2
3	DIM	SCN	CH3
4	HA	SP	CH4
5	HC	SPM	CH5
6	IC	SQ	AUX A
7	MON	TA	AUX B
8	OPT	^	AUX C
9	OST	v	EMG
10	PA	No printing	

KCH-10

KCH-11

Fig. 3

INSTALLATION

Fig. 4-1 Knob insertion

Fig. 4-2 Knob removal

3. Optional Voice Scrambler Function

The optional voice scrambler function can be used by two methods.

1. Assign this function to the OPT key by using the programming software (KPG-44D).
When the OPT key is pressed, the **[OPT]** indicator comes on, and the optional (scrambler) function is enabled. When the key is pressed again, the **[OPT]** indicator goes off and the function is disabled.
2. Assign the optional scrambler function to each channel by using the programming software (KPG-44D). The optional scrambler function can be used without pressing the OPT key.

3-1. Code setting

The code can be set by two methods.

1. Hold down the OPT key to enter the code setting mode. Codes 1 to 16 will be displayed. Set a code by turning the [Up/Down] knob. When the OPT key is pressed again, the code setting mode terminates.
2. Set a code for each channel by using the programming software (KPG-44D).

3-2. Voice scrambler board connection

• Modification

1. Remove the upper half of the case of the TK-690H(B).
2. Remove R515 and R604 on the control unit (X57-560 B/2) (Refer to page 21).

• Connection

The functions of pins of CN508 on the control unit (X57-560 B/2) are shown in the figure.

Join the CN508 connector to the voice scrambler board via the E37-0808-05 connector cable.

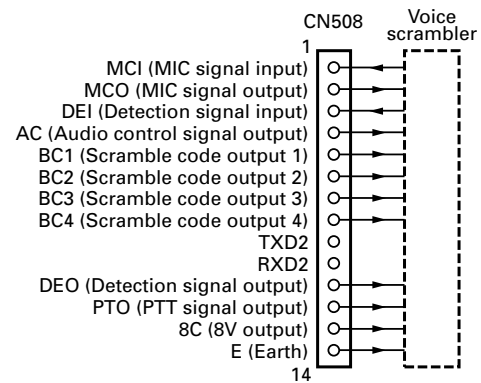

Fig. 5

4. Optional ANI Function

• Connection

Join the CN507 connector to the ANI board via the E37-0809-05 connector cable, and the CN508 connector to the ANI board via the E37-0808-05 connector cable.

Fig. 6

INSTALLATION

5. Ignition Sense Cable (KCT-18)

The KCT-18 is an optional cable to use the following functions:

5-1. Ignition function

The ignition function allows you to turn the transceiver's power on and off with the ignition key of your car. When you are driving with the ignition key on, the horn alert function is disabled.

5-2. Timed power off function

The timed power off function turns the transceiver's power off the time specified with the programming software (KPG-44D) after the ignition key is turned off. When you are driving with the ignition key on, the horn alert function is disabled.

The ignition sense function and the timed power off function can be used at the same time.

5-3. Modification

• If the TK-690H(B) and KCH-10 or KCH-11 are used

1. Remove the short plug from the accessory connector (9 pins) on the back of the transceiver.
2. Insert the KCT-18 into pin 1 (IGN).
3. Remove the upper half of the case of the TK-690H(B).
4. Set jumper resistors (0 ohm), R504, R506, R742 and R743, on the control unit (X57-560 B/2) as shown in Table 1 (Refer to page 21).
5. Reinstall the upper half of the case.

• When the remote kit is used

If the accessory connector (9 pins) on the rear of the transceiver is available, use the method described above. (If the KRK-7DB or KRK-8DBH is used, use the accessory connector (9 pins) on the back of radio 1.)

If the accessory connector (12 pins) on the back of the control head is used:

1. Remove the plug from the accessory connector (12 pins) on the back of the control head.
2. Cut off the end of the rubber cap (accessory), insert the KCT-18 into the cap, and insert it into pin 1 (IGN) of the short plug.
3. Install the short plug and rubber cap on the connector on the rear of the control head, then clamp the bottom of the rubber cap with the supplied tie wrap.
4. Remove the upper half of the case of the TK-690H(B).
5. Set jumper resistors (0 ohm), R504, R506, R742 and R743, on the control unit (X57-560 B/2) as shown in Table 1 (Refer to page 21).
6. Reinstall the upper half of the case.

Note : If the KCT-18 is used for the KRK-8DBH, use the 9-pin plug on the back of radio 1 or the 12-pin plug on the back of head 1. The plugs on radio 2 and head 2 cannot be used. If the KCT-18 is used for the KRK-7DB, use the 9-pin plug on the back of radio 1 or the 12-pin plug on the back of the head. The plug on radio 2 cannot be used.

Available function when KCT-18 is connected	R504	R506	R742	R743
Horn alert function OFF during driving, Timed power off function (Default)	Present	Absent	Present	Absent
Horn alert function OFF during driving, Ignition function	Absent	Present	Present	Absent
None (The transceiver cannot be turned on.)	Absent	Absent	Present	Absent
HA function OFF during driving, Ignition function & Timed power off function	Present	Absent	Absent	Present

Table 1 R504, R506, R742 and R743 setup chart (Refer to page 21)

Fig. 7

6. External Speaker (KES-4)

The speaker output from the TK-690H(B) is as follows:

1. The KCH-10 has a built-in speaker (3W/8 ohms).
2. The KCH-11 does not have a built-in speaker.
3. The external speaker output from the accessory connector (9 pins) on the back of the transceiver is 13W/4 ohms. Use the KES-4.
4. The speaker output from the accessory connector (12 pins) on the back of the control head is 2W/4 ohms. If the remote kit (KRK-5, KRK-6DH, KRK-7DB or KRK-8DBH) is used, use the KSP-1A or KES-4. If the KSP-1A is used, do not attempt to modify the transceiver to increase the audio output.

Note : Since the TK-690H(B) uses a BTL audio amplifier, do not ground the speaker output pin.

INSTALLATION

6-1. Connection for the KES-4 with the TK-690H(B)

- **When taking the AF output from the accessory connector (9-pin) on the rear of the radio**

The following tools are required for changing the connector.

Extracting tool

the following extracting tool is recommended :
Molex Inc. Order No. : 11-03-0002

1. Remove the connector with jumper from the external speaker connector on the rear panel of the radio (Fig. 8-1).

Note : Save the jumper, which is required when the radio is used without the external speaker.

2. Remove the terminals with the jumper from the connector housing holes number 3 and 6 using the extracting tool.

Removing the jumper lead (Fig. 8-2)

- 1) Insert the extracting tool (11-03-0002) into the connector while pushing the jumper lead in the direction of (a).
- 2) Push the extracting tool into collapse the barbs of the crimp terminal.
- 3) Pull out the lead while continuing to push the extracting tool in the direction (b).
3. Reinsert the terminal with the black and white stripe lead into hole number 2, and the terminal with the black lead into hole number 6 (Fig. 8-3).
4. Attach the connector to the external speaker connector on the radio.

Fig. 8-1

Fig. 8-2

Fig. 8-3

6-2. Connection for the KES-4 with the remote kit (KRK-5, KRK-6DH, KRK-7DB, KRK-8DBH)

- **When output is from the 12-pin accessory connector on the rear of the control head : remote operation**

• Modification of plug (12-pin)

1. Remove the plug from the accessory connector (12-pins) on the rear of the control head.
2. Cut off the end of the rubber cap, insert the KES-4 speaker cable into the cap, and insert it into pins 10 and 11.
3. Install the plug and rubber cap on the accessory connector on the rear of the control head, then clamp the bottom of the rubber cap with the supplied tie wrap.

Fig. 9

• If the KCH-10 is used

If the KSP-1A or KES-4 is connected to the 12-pin accessory connector, cut the internal speaker wire at the base of the speaker.

If the internal speaker is used, cut the wire connected to pins 10 and 11 of the 12-pins accessory connector at the base of the connector (Fig. 10).

Fig. 10

INSTALLATION

6-3. Modification to increase the audio output of the control head

The speaker output can be increased to 13W by moving jumper resistor (0 ohm) R628 on the control unit (X57-560 B/2) to R627. In this case, the KCH-10 internal speaker cannot be used because the maximum input (3W) of the internal speaker is exceeded. Therefore, use the KES-4.

Note : Even if the KRK-6DH is modified in this way, the audio output of head 2 cannot be increased. To increase the audio output of head 2 of the KRK-8DBH, modify radio 2 in the same manner.

6-4. Use as public address speaker

1. Remove the short plug from the 9-pin accessory connector on the rear of the radio. (Remove the jumpers as described in Section 5-1.)
2. Insert the KES-4 speaker leads into pins 7 and 8.
3. If you remove jumper shorting pins 3 and 6, the 20W PA (public address) voice signal is output from pins 7 and 8. (Only when the PA or SP switch is on.)
4. If you use the radio with pins 3 and 6 shorted, the internal speaker is available (when the KCH-10 is used). The KCH-11 does not contain a speaker.

Note : Relation ship between accessory connector (9-pins) connection and speaker output.
When pins 3 and 6 are shorted ; The 3W internal speaker is used (KCH-10 only).
When pins 3 and 6 are open and output is from pins 7 and 8 ; The 20W external speaker is used.

Fig. 11

7. Horn Alert Function

The HR1 pin of the accessory connector (9-pin) on the rear of the transceiver is an open collector and the maximum current is 100mA. The maximum available current can be increased to 1A by installing a relay.

1. Remove the upper half of the case of the TK-690H(B).
2. Move jumper resistor (0 ohm) R691 on the control unit (X57-560 B/2) to R692. To make the HR2 pin, remove R692 (Refer to page 21).
3. Remove screws and erect the PC board. Install and solder relay K501 (Part No. : S76-0407-05).
4. Reinstall the PC board and the upper half of the case.

	Default	Modification 1	Modification 2
R690	Present	Present	Absent
R691	Present	Absent	Absent
R692	Absent	Present	Present
State			

Table 2 (Refer to page 21)

8. Accessory Terminal Function

8-1. 25-pin accessory terminal

• Pin 13

MI/DI (MIC Signal Input/Output or Data Audio Input)
This pin has one of the two functions listed in Table 3 by setting jumper resistors (0 ohm) R640 and R641 on the control unit (X57-560 B/2). (Refer to page 21).

1) MIC signal input/output

This pin is directly connected to the MIC input pin of the transceiver, so it has the same function as the MIC input pin. When the input is 5mV/3 kHz, DEV (600 ohms) modulation is obtained. The MIC input is output from the transceiver panel as it is.

2) Data audio input

The signal from this pin passes through the LPF (fc: about 10kHz), is summed with the MIC AMP output, and goes to the modulator. Therefore, it is not preemphasized.

• Pin 14

SB (DC Power Output After Power Switch)
The maximum output (13.4V / 0.5A) can be obtained by modifying the control unit as follows:
Short the land of the print pattern near CN505 of the control unit (X57-560 B/2).

R640	R641	Function
Present	Absent	MIC signal input/output
Absent	Present	DATA audio input : Default

Table3 (Refer to page 21)

9. Connection with the Remote Kit

When the KRK-5, KRK-6DH, KRK-7DB or KRK-8DBH is used, set chip resistors and transistors as shown in the table below.

	KRK-5	KRK-6DH	KRK-7DB	KRK-8DBH
Radio 1	Unnecessary			
Radio 2	-		Remove R546 and R661 Move R602 to R705.	

Table 4 (Refer to page 21)

INSTALLATION

DISASSEMBLY FOR REPAIR

4. Removing the Control Unit (X57-560 B/2)

1. Remove the 8 screws (❶).
2. With a screwdriver, remove the 2 leaf springs holding the ICs to the frame (❷).
3. Remove the flat cable (CN502).
4. Remove the 2 connectors CN501 and CN506.
5. Remove the connector (CN505) from D-sub connector (25P) on the rear.

5. Removing the Accessory Connector on the Rear

1. Confirm that the screw holding +DC cable (red) and the screw holding -DC cable (black) of the final unit are removed, and that CN506 of the control unit (X57-560 B/2) is disconnected. Remove the 4 screws on the rear (❸).
2. Pull out the connector. (Take the connector terminals out through the opening in the frame.)

TK-690H(B)

DISASSEMBLY FOR REPAIR

6. Disassembly of the Display Unit (X54-3190) : KCH-10

1. Pull out the VOL and UP/DOWN knobs (❶).
2. Remove the 2 hexagonal nuts (❷).
3. Disconnect the 2 connectors (CN2 and CN4) of the display unit (X54-3190 A/3). You can remove the UP/DOWN encoder (❸).
4. Remove the waterproof seal (❹).
5. Remove the 4 screws (❺) holding the speaker and PC board fitting.
6. Remove the 3 screws (❻). You can remove the display units (X54-3190 A/3 and C/3) (❼ and ❸).
7. Remove the 3 screws (❾), and remove the sub-panel (❿) and keytop (⓫).

7. Disassembly of the Display Unit (X54-3200) : KCH-11

1. Pull out the VOL and UP/DOWN knobs (❶).
2. Remove the 2 hexagonal nuts (❷).
3. Remove the waterproof seal (❸).
4. Disconnect the connector (CN4) of the display unit (X54-3200 A/2), and remove the 5 screws (❹). you can remove the up/down encoder (❺) and display unit.
5. Remove the 4 screws (❻), and remove the sub-panel (❼) and keytop (❸).

CIRCUIT DESCRIPTION

1. Transmitter Circuit

1-1. Microphone amplifier section (X57 B/2)

The audio input from the microphone is attenuated by VR501 and passes through the active high-pass filter (pre-emphasis circuit) in IC505, the compressor circuit in IC504, the IDC (limiter circuit) in IC505, the summing amplifier circuit in IC510, the active low-pass filter in IC510, the summing amplifier circuit in IC513, and the D/A converter in IC512, and is output from the CN502 to the CN202. Q504 is used as a microphone mute switch.

Fig. 1

1-2. Modulation section (X57 A/2)

The signal from the MO terminal of the CN202 goes to D305 in the VCO, and the VCO is directly modulated. The transmit signal output from the VCO passes through switch D306, is amplified by Q203, and is output from the CN203 to the CN1.

Fig. 2

1-4. Final amplifier section (X45)

The signal from the DO terminal of the CN1 is applied to drive two transistors Q1 and Q5, and the output is divided into two signals which are amplified by Q6 and Q7. The signals are mixed and the resulting signal is fed through transmit/receive switching diode; D2, D3, D4 and D10, low-pass filter, and CM coupler to the antenna connector.

CM coupler is a coil for detecting traveling and reflected waves. Traveling waves are detected by D9 and fed through the APC control to differential amplifiers Q8, which compare the signal level with the reference voltage of PC tuned.

The output is amplified by DC amplifier Q7 to control APC DC amplifier Q6. Q7 controls the power supply voltage for pre-drive amplifier Q203 on the TX-RX unit (X57-560 A/2), keeping the transmitter output constant. To protect the transmitter power amplifier stages, there are two protection circuits which one is against abnormal antenna loading and the other is against overheating.

If an abnormal antenna load is connected, the reflected wave level increases. Reflected waves are detected by D6, D5 and the output level is fed to the differential amplifier Q8, leading to the transmitter output power being reduced in the way already described. If an abnormal high temperature is detected by the thermistor TH1, DC SW Q2 is made to reduce the reference voltage of the PC tuned. This also leads to the transmitter output power being reduced. Antenna switching is done by four diodes; D2, D3, D4 and D10 with 8T.

Fig. 3

2. Receiver Circuit

The incoming received signal from the antenna socket passes through the low-pass filter, the transmit/receive switching diodes (D2, D3, D4 and D10), and the second low-pass filter, then is fed to CN104 in the TX-RX unit.

The signal passes through the band-pass filter in the TX-RX unit, is amplified by RF amplifier Q101 and Q102, then passes through the second band-pass filter (BPF). The tuned varactor BPF (L101, L102, L104 and L105) changes the cut-off frequency according to the receive frequency.

After the signal has passed through the BPF, it enters RX first mixer Q110 to Q113. The local signal (received frequency + 10.7MHz) from the PLL also enters the first mixer. The first mixer is a double-balanced type consisting of four FETs, which converts the receive signal to the 10.7MHz first IF signal.

The 10.7MHz IF signal passes through NB (noise blanker) unit A102 and IF amplifier Q103, and enters NB gate Q105 and Q106. The pulse noise in the IF signal is detected by the NB unit, and removed by the NB gate. The IF signal passes through the monolithic crystal filter (XF101), IF amplifier Q301, monolithic crystal filter (XF102), and enters FM IF system IC (IC101).

The signal is heterodyned again to 455kHz using the second local signal generated by the crystal oscillator (11.155MHz), at the second mixer in IC101. The second IF signal is filtered by CF101 and CF102 (ceramic filter), amplified by limiting amplifiers in IC101, and is detected as an FM signal.

The output AF signal from IC101, then passes through the control unit's HPF and D/A converter IC. After entering the AF power amplifier (IC522), the signal is output from the speaker.

TK-690H(B)

CIRCUIT DESCRIPTION

Item	Rating
Nominal center frequency	10.7MHz
Pass bandwidth	7.5kHz or more at 3dB
Attenuation bandwidth	±25kHz or less at 40dB
Ripple	1.0dB or less
Insertion loss	2.5dB or less
Guaranteed attenuation	80dB or more at $f_{o\pm 1000\text{kHz}}$
Terminating impedance	3.0kΩ / 1.5pF

**Table 1 Crystal filter (L71-0534-05)
(TX-RX unit XF101)**

Item	Rating
Nominal center frequency	10.7MHz
Pass bandwidth	±7.5kHz or more at 3dB
Attenuation bandwidth	±25kHz or less at 18dB
Ripple	0.5dB or less
Insertion loss	2.0dB or less
Guaranteed attenuation	40dB or more at $f_{o\pm 1000\text{kHz}}$
Terminating impedance	3.0kΩ / 2.5pF

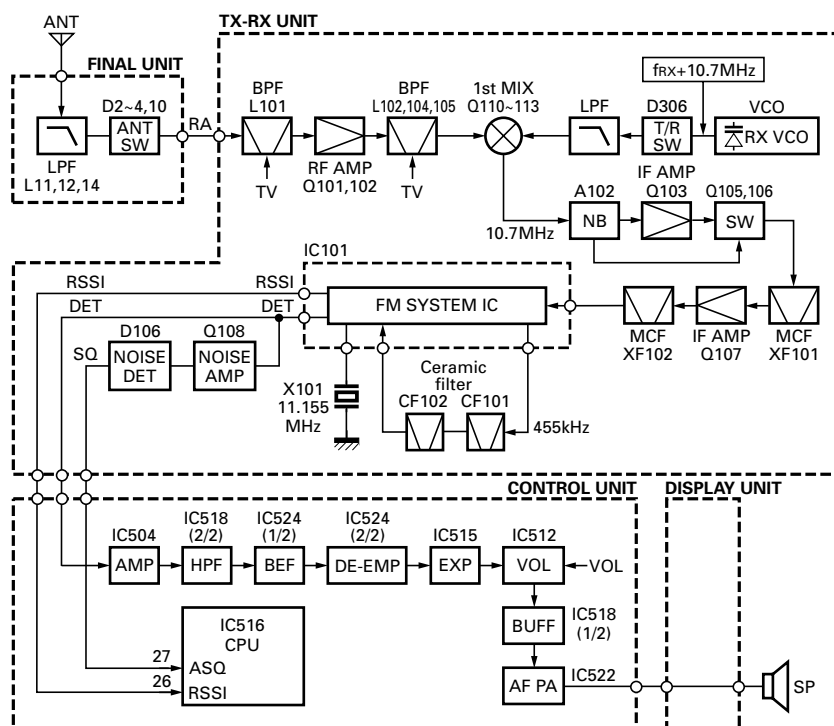

Fig. 4 Receiver circuit

3. Squelch Circuit

The output from IC101 enters FM IC again, then passed through a band-pass filter. The noise component output from IC101 is amplified by Q108 and rectified by D106 to produce a DC voltage corresponding to the noise level.

The DC voltage is sent to the analog port of the CPU (IC516/pin 27). And IC101 output a DC voltage (RSSI) corresponding to the input of the IF amplifier. The CPU reads the RSSI signal via pin 26. IC101 determines whether to output sounds from the speaker by comparing the input voltage of pin 27 with the present value.

Only during scan, the RSSI DC voltage is used together with the noise wave detection pin's DC voltage (pin 27).

Fig. 5 Squelch and RSSI voltage vs ANT input level

CIRCUIT DESCRIPTION

4. RX BPF (L101,102,104,105)

The signals are then fed into band-pass filter that uses varactor diode tuning to reject unwanted signal components, and is fed to the 1st mixer.

Fig. 6

5. VCO/PLL Circuit

The VCO of TK-690H(B) consists of two VCO circuits which one oscillates the transmit signal with Q306 and the other does the first local receive signal with Q307.

Each oscillators are switched by turning the source line for Q308, Q309 and Q310 on and off. The signal output of the VCO is amplified by the buffer amplifier Q311 and divided into two signals which one is amplified by Q313 and the other is done by Q312. The signal from Q313 passes through D306 which is transmit/receive switch, is amplified by Q203, and is output from the CN203.

The signal from Q312 passes through the low-pass filter and is applied to IC301 which is PLL frequency synthesizer with VCXO ; X301. The VCXO of which the frequency stability is within 5.0ppm (temperature range of -30 to $+60^{\circ}\text{C}$) generates 16.8MHz. The PLL-IC consists of three modulus prescaler, fractional divider, reference divider, digital phase comparator with charge pump output.

This PLL-IC is Fractional-N type synthesizer and performs is 25kHz reference signal which is fifth of the channel step (5kHz). The input signal from the pins 5 and 8 of the PLL-IC is divided down to the 25kHz and compared at digital phase comparator.

The pulsed output signal of the digital phase comparator is applied to the charge pump and transformed into DC signal. The DC signal from the pin 14 of the PLL-IC passes through the active low-pass filter (loop filter), is applied to the VCO and controls to keep the frequency of the VCO.

The serial data (DT, CP, EP) from the microprocessor IC516 is input to the PLL-IC. And PLL lock condition is always monitored by the pin 28 (UL) of IC516.

Fig. 7 VCO/PLL circuit

6. Control Circuit

The control unit consists of microprocessor IC and its peripheral circuits. It controls the TX-RX unit and transfers data to and from the control unit. The CPU (IC516) mainly performs the following :

- 1) Switching between transmission and reception according to the PTT signal input.
- 2) Reading channel, frequency, and program data from the memory circuit.
- 3) Sending frequency data to the PLL.
- 4) Turning the squelch on and off according to the voltage from the squelch circuit.
- 5) Controlling the audio mute circuit according to input decode data.
- 6) Sending encode data (QT, DQT).
- 7) Sending data to the D/A converter.

6-1. Memory circuit

A flash memory (IC519) with a capacity of 2Mbits contains the transceiver control program for the CPU (IC516) and data such as transceiver channels and operating features.

This program can be easily written from an external devices. Data, such as DTMF memories and operating status, tuning data are programmed into the EEPROM (IC514).

6-2. Shift register

IC517 and IC523 are an interface IC for I/O port expansion. It is used to expand the CPU (IC516) output ports.

CIRCUIT DESCRIPTION

6-3. D/A converter

IC512 is used as a conventional semi-fixed-resistor converter. It sets the following :

- 1) RX sensitivity
- 2) Transmission power
- 3) Modulation level
- 4) Audio power
- 5) Frequency

6-4. Power supply circuit

D507 is a protection diode for the excess voltage.

- 1) Turning the transceiver on/off with a power switch. Each time you press the power switch, the IC501 output is alternated. The output is feed through Q501, Q503 to turn Q519 on. The power source is always supplied to the IGN terminal. If 24V DC is supplied to the transceiver by mistake, Q502 is turned on then Q503 and Q519 are turned off to protect the transceiver (turned off).
- 2) Turning the transceiver on with a power switch, then turning the transceiver off with the Timed Power Off (TPO) function. POF is controlled by CPU's TPO function. POF is to turn the transceiver off. The POF logic signal is feed through Q507 and Q506 then 8 pin of IC501 to turn the transceiver off.
- 3) Turning the transceiver on with IGN SENS, then turning the transceiver off with TPO function. If IGN is turned on, Q543 and Q542 are turned on then the IC501 detects the change. IC501 outputs the signal to turn Q541 off, then Q503 and Q519 are turned on. When POF is detected by 6 pin of IC501, Q541 is turned on then Q503 and Q519 are turned off.

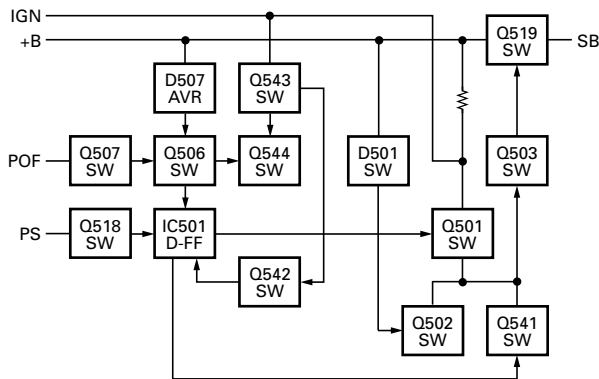

Fig. 8 Power supply circuit

7. Signalling Circuit

7-1. Encode

• QT, DQT

The CPU (IC516) transmits the encode data selected by the program. The data items are output from CPU pin 34.

The signal from this pin passes through the CR low-pass filter and goes to the summing amplifier (IC510) in the microphone amplifier.

• DTMF

The DTMF-encoder (IC511) transmits the encode data. The encode data is passed to the D/A converter (IC512) for DTMF deviation adjustment, and goes to IC505 in the IDC circuit of the microphone amplifier.

7-2. Decode

• QT, DQT

The demodulated signal from CN502 pin 5 is amplified by IC521 and passes through a low-pass filter (IC502) to remove audio components. The signal is input to pin 25 of the CPU. The CPU digitizes this signal, and decodes the signal.

• 2 TONE

The demodulated signal from CN502 pin 5 is amplified by IC504 and passes through a high-pass filter (IC518) and a band-elimination filter (IC524) to remove QT and DQT.

This signal is amplified by IC521 and inputs pin 91 of the CPU.

• DTMF

The demodulated signal from CN502 pin 5 is amplified by IC504 and passes through a high-pass filter (IC518) and band-elimination filter (IC524) to remove QT and DQT.

This signal inputs pin 1 of the DTMF decoder (IC525).

Fig. 9 Decode

CIRCUIT DESCRIPTION

8. Display Unit

The optional display unit (front panel unit) for the TK-690H(B) comes in two models : KCH-10 and KCH-11

8-1. KCH-10

This display unit consists of a CPU (IC4) containing the LCD driver, a reset IC (IC2), 5V AVR (IC1), EEPROM (IC3), and other components.

• Encoder

Channels are changed by the rotary encoder (ENC). The up/down pulses from the rotary encoder enter the CPU (IC4), and converted to a serial data signal, and are sent to the control unit.

• Power supply

Power is supplied to the CPU by converting SB from the control unit to 5V by IC1. And SB is supplied to the LED for backlight.

• CPU (containing LCD driver)

The on/off signals of keys other than the power switch, and the PTT and HOOK signals, are converted to serial data and sent to the control unit. Data is displayed on the 13-segments, 8-digits LCD and 7-segments, 3-digits LCD by the built-in LCD driver.

• Dimmer function

From the control of the CPU's DM1/DM2 port, you can switch the LCD/KEY backlight, busy/TX LED, or the optional KMC-28 key backlight as shown in the following table.

Dimmer setting	LCD	KEY	Busy/TX	KMC-28
H	H	ON	ON	ON
M	M	ON	ON	ON
L	L	ON	ON	ON
OFF	OFF	OFF	OFF	OFF

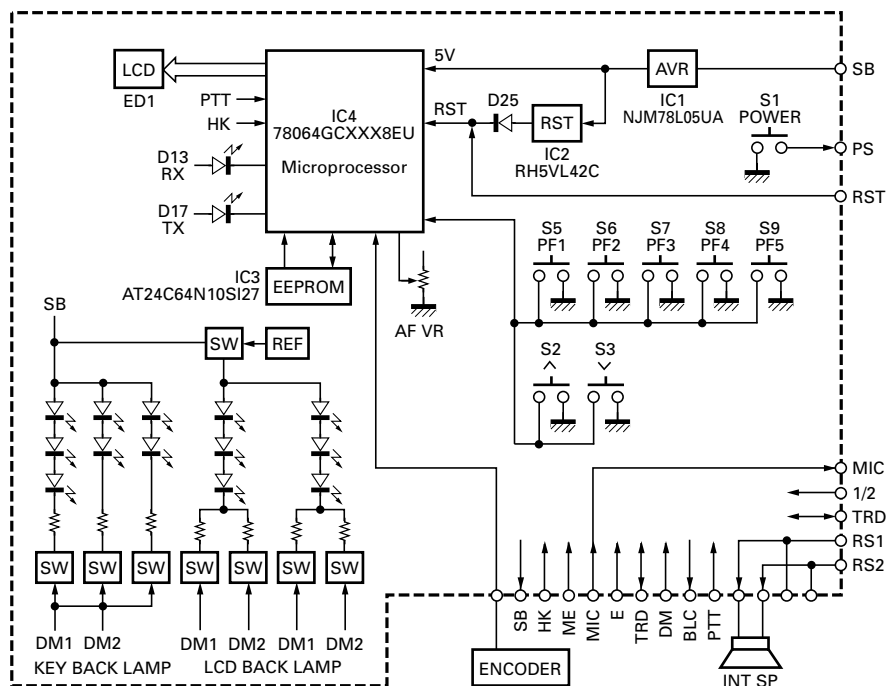

Fig. 10 KCH-10 block diagram

CIRCUIT DESCRIPTION

8-2. KCH-11

This display unit consists of a CPU (IC4) a reset IC (IC2), 5V AVR (IC1), EEPROM (IC3), and other components.

• Encoder

Channels are changed by the rotary encoder (ENC). The up/down pulses from the rotary encoder enter the CPU (IC4), and converted to a serial data signal, and are sent to the control unit.

• Power supply

Power is supplied to the CPU by converting SB from the control unit to 5V by IC1. And SB is supplied for the LED of backlight.

• CPU

The on/off signals of keys other than the power switch, and the PTT and HOOK signals, are converted to serial data and sent to the control unit. Data is displayed on the 14-digits and 3-digits dot matrix alphanumeric display.

• Dimmer function

From the control of the CPU's DM1/DM2 port, you can switch the LCD/KEY backlight, busy/TX LED, or the optional KMC-28 key backlight as shown in the following table.

Dimmer setting	LCD	KEY	Busy/TX	KMC-28
H	H	ON	ON	ON
M	M	ON	ON	ON
L	L	ON	ON	ON
OFF	OFF	OFF	OFF	OFF

D303	Frequency controller	TX-VCO	Q506,507	DC switch	Timed power off switch
D304	Frequency controller	RX-VCO	Q509	DC switch	Off when P/A
D305	Modulator		Q510	DC switch	Off when EXT SP
D306	RF switch	TX/RX	Q511	DC switch	Off when INT SP
			Q512	DC switch	Off when RX busy
			Q513	DC switch	
			Q514	Muting switch	On when AF mute
			Q516,517	DC switch	On when on signalling code
			Q518	DC switch	On when push the power switch
			Q519	Power switch	On when the power switch on
			Q520	DC switch	On when horn alert
			Q522	Beat shift switch	On when beat shift

Control Unit (X57-5600-XX) (B/2)
-10 : K -11 : K2 -12 : K3

Ref. No.	Use/Function	Operation/Condition
IC501	D FF	

TK-690H(B)

DESCRIPTION OF COMPONENTS

Ref. No.	Use/Function	Operation/Condition
Q523	DC switch	Serial data inverter
Q524	DC switch	Serial data transmitter
Q525	DC switch	
Q533~540	DC switch	On when output port on
Q541	DC switch	On when timed power off
Q542,543	DC switch	IGN switch
Q544	DC switch	Timed power off switch
D501	Voltage reference	Protection of high voltage
D502	Reverse current prevention	
D503	Surge absorption	
D504	Voltage reference	
D505,506	DC switch	
D507	Voltage reference	
D508	DC switch	
D511	DC switch	
D512	Reverse current prevention	
D513~517	Surge absorption	
D519	Surge absorption	
D521	Surge absorption	
D523,524	Surge absorption	
D526,527	Surge absorption	
D528,529	Reverse current prevention	

Display Unit (X54-3190-20) : KCH-10

Ref. No.	Use/Function	Operation/Condition
IC1	AVR	Input : SB Output : 5V
IC2	Reset	
IC3	EEPROM	
IC4	CPU/LCD driver	
Q1	9V AVR	
Q3	DC switch	Dimmer "Hi", "Low" : ON
Q4	DC switch	Λ , v key lighting : ON
Q5	DC switch	Dimmer "Hi", "Mid" : ON
Q6	DC switch	Dimmer "Hi", "Low" : ON
Q7	DC switch	Dimmer "Hi", "Mid" : ON
Q9	DC switch	"PF1", "PF2", "PF3" key lighting : ON

Ref. No.	Use/Function	Operation/Condition
Q11	DC switch	"PF4", "PF5" key lighting : ON
Q12,13	TRD switch	
Q14,15	DC switch	On when output port on
D1,2	Surge absorption	
D5	Voltage reference	
D6~11	LCD backlight	
D12	BUSY LED	
D13	TX LED	
D16,17	Surge absorption	
D19~21	Surge absorption	
D24	DC switch	Key lighting : ON
D25	DC switch	

Display Unit (X54-3200-20) : KCH-11

Ref. No.	Use/Function	Operation/Condition
IC1	AVR	Input : SB Output : 5V
IC2	Reset	
IC3	EEPROM	
IC4	CPU	
Q1	9V AVR	
Q2	DC switch	Λ , v key lighting : ON
Q3	DC switch	Dimmer "Hi", "Low" : ON
Q4	DC switch	"MON", "PF6", "PF7" key lighting : ON
Q5	DC switch	"PF1", "PF2", "PF3" key lighting : ON
Q6	DC switch	Dimmer "Hi", "Mid" : ON
Q7	DC switch	"SCN", "PF8", "PF9" key lighting : ON
Q8	DC switch	"PF4", "PF5" key lighting : ON
Q9,10	TRD switch	
Q14,15	DC switch	On when output port on
D1,2	Surge absorption	
D5	Voltage reference	
D6	BUSY LED	
D7	TX LED	
D11,12	Surge absorption	
D14~16	Surge absorption	
D18	DC switch	Key lighting : ON
D19	DC switch

7	Single tone 1633Hz	2 tone 321.7/928.1Hz
8	DTMF [9]	DTMF [159]
9	MSK	None

Panel Test Mode

The transceiver's transmission output, receive sensitivity, and other items are measured and QT, DQT, 2tone and DTMF signaling is decoded in this mode.

• To enter the panel test mode

Hold down [PF1] and turn the power switch on to enter this mode. The test frequency channel and test signalling channel will be displayed.

Panel Tune Mode

The transceiver is adjusted in this mode.

• To enter the panel tune mode

Press the [GRP ^] key in the panel test mode.

In this mode, QT and DQT signalling is decoded, but 2tone and DTMF signalling is not decoded.

The adjustment items, the frequency and signalling, other than the maximum deviation and sensitivity, return to the values that were effective for the test frequency channel and test signalling channel before entering the panel tune mode.

ADJUSTMENT

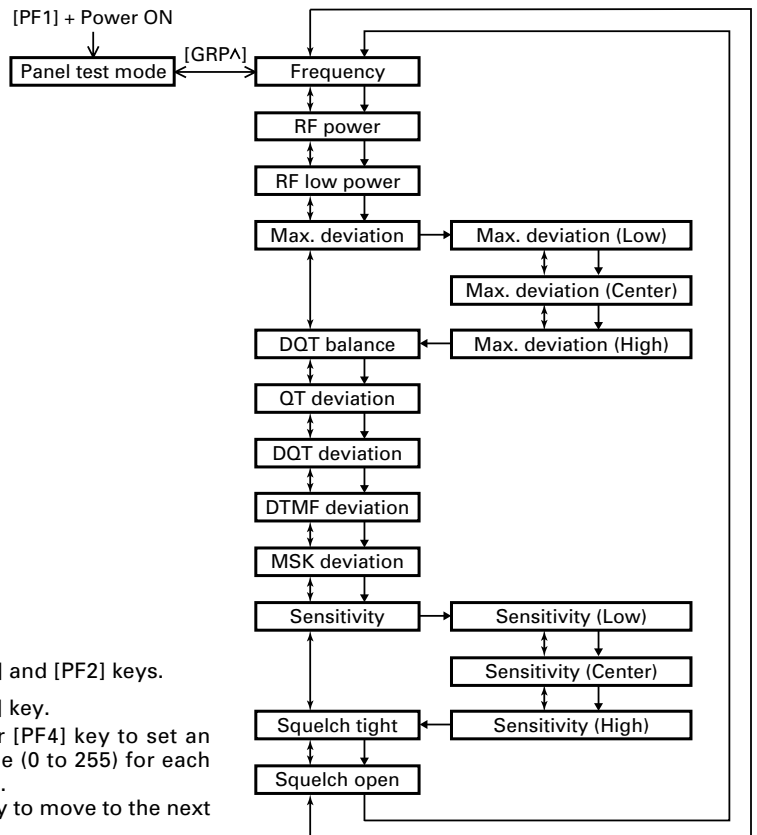

• Tuning item and display (XXX : 0~255)

Tuning item	Basic display	Full display	Note

ADJUSTMENT

Test Equipment Required for Alignment

No.	Test Equipment	Major Specifications	
1	Standard Signal Generator (SSG)	Frequency Range Modulation Output	50kHz to 500MHz. Frequency modulation and external modulation. 0.1μV to greater than 1mV.
2	Power Meter	Input Impedance Operation Frequency Measurement Capability	50Ω. 50MHz or less. Vicinity of 200W.
3	Deviation Meter	Frequency Range	29.7 to 50.0MHz.
4	Digital Volt Meter (DVM)	Measuring Range Accuracy	1 to 20V DC. High input impedance for minimum circuit loading.
5	Oscilloscope		DC through 30MHz.
6	High sensitivity Frequency Counter	Frequency Range Frequency Stability	10Hz to 200MHz. 0.2ppm or less.
7	Ammeter		30A.
8	AF Volt Meter (AF VTVM)	Frequency Range Voltage Range	50Hz to 10kHz. 3mV to 3V.
9	Audio Generator (AG)	Frequency Range Output	50Hz to 5kHz or more. 0 to 1V.
10	Distortion Meter	Capability Input Level	3% or less at 1kHz. 50mV to 10Vrms.
11	Voltmeter	Measuring Range Input Impedance	10 to 1.5V DC or less. 50kΩ/V or greater.
12	4Ω Dummy Load		Approx. 4Ω 30W.
13	Regulated Power Supply		(Adjustable from 9 to 17V, 30A). Useful if ammeter equipped.

Caution

Since the RX AF output is a BTL output, there is a DC Component. Isolate this with a capacitor or transformer as shown in the figure.

ADJUSTMENT

Item	Condition	Measurement			Adjustment			Specifications/Remarks
		Test-equipment	Unit	Terminal	Unit	Parts	Method	
2. Setting	<ul style="list-style-type: none"> Receiver section The indicated SSG output level are for maximum output. Whenever there is no modulation designation, standard modulation (MOD : 1kHz, DEV : 3kHz) <p>Connect the front panel (KCH-10 or KCH-11) to the transceiver's body.</p>							
3. PLL lock voltage	1) CH-SIG : 3-1	DC VM Power meter	TX-RX (A/2)	CV	TX-RX (A/2)	A (TC302)	1.5V	±0.1V
	2) CH-SIG : 3-1 PTT : ON					C (TC301)		
	3) CH-SIG : 2-1						Check	8.0V or less
	4) CH-SIG : 2-1 PTT : ON							
4. Transmit frequency	1) CH-SIG : 1-1 Select FREQ_XXX in tune mode PTT : ON	Power meter f. counter	Rear	ANT	Panel	PF3 key PF4 key	CH-1 frequency	K : ±50Hz K2 : ±60Hz K3 : ±70Hz
5. BPF	1) CH-SIG : 2-1 Spectrum analyzer Span : 50MHz Scale : 5dB div Tracking generator Output : -20dBm	Spectrum analyzer	TX-RX (A/2)	CN101	TX-RX (A/2)	L101 L102 L104 L105	Adjust the coils in the following order : L101, L102, L104, L105	
		Tracking generator	Rear	ANT				
	K						Adjust it so it is almost symmetrical (±1MHz), and so the gain is maximum.	
	K2						Adjust it so it is almost symmetrical (±2MHz), and so the gain is maximum.	
	K3						Adjust it so it is almost symmetrical (±2MHz), and so the gain is maximum.	

ADJUSTMENT

Item	Condition	Measurement			Adjustment			Specifications/Remarks
		Test-equipment	Unit	Terminal	Unit	Parts	Method	
6. MCF	1) CH-SIG : 1-1 Spectrum analyzer Span : 25kHz Scale : 2dB div Center frequency : 10.70MHz Tracking generator Output : -20dBm	Spectrum analyzer Tracking generator	TX-RX (A/2)	CN103 CN102	TX-RX (A/2)	L133 L132 L131 L129 L128	Adjust it so it is almost symmetrical, and so the gain is maximum. Adjust the coils in the following order : L133, L132, L131, L129, L128.	
7. Distortion	1) CH-SIG : 1-1 SSG output : -53dBm/501μV AF output : 1V/4Ω	SSG Distortion meter AF VTVM Oscilloscope 4Ω dummy load	Rear	ANT EXT.SP			Check	3% or less If the distortion value exceeds 3%, you must adjust L129 to obtain a minimum distortion value.
8. RF power (High power)	1) CH-SIG : 1-1 Select _POW_XXX in tune mode PTT : ON	Power meter Ammeter	Rear	ANT	Final	VR1	Maximum clockwise	115W or more
							110W adj.	110W±5W, 20A or less
(Low power)	1) CH-SIG : 1-1 Select LPOW_XXX in tune mode PTT : ON				Panel	PF3 key PF4 key	Check	110W±1W
							45W adj.	45W±1W
9. Maximum deviation	1) Select __L MXDV_XXX in tune mode PTT : ON Deviation meter filter HPF : OFF LPF : 15kHz De-emphasis : OFF AG : 1kHz/50mV	Power meter Deviation meter AF VTVM AG Oscilloscope	Rear	ANT	Panel	PF3 key PF4 key	±4.05kHz	±0.05kHz
	2) Select __C MXDV_XXX in tune mode PTT : ON		Panel	MIC				
	3) Select __H MXDV_XXX in tune mode PTT : ON							
10. MIC sensitivity	1) CH-SIG : 1-1 PTT : ON Deviation meter filter HPF : OFF LPF : 15kHz De-emphasis : OFF AG : 1kHz/5mV				TX-RX (B/2)	VR501	Check	2.75~3.25kHz

ADJUSTMENT

Item	Condition	Measurement			Adjustment			Specifications/Remarks		
		Test-equipment	Unit	Terminal	Unit	Parts	Method			
11. DQT balance	1) CH-SIG : 1-2 Select BLNC_XXX in tune mode PTT : ON Deviation meter filter HPF : OFF LPF : 3kHz De-emphasis : OFF	Power meter Deviation meter AF VTVM AG Oscilloscope	Rear	ANT	Panel	PF3 key PF4 key	Make the demodulation waveform neat.	Flat the a parts. 		
12. QT deviation	1) CH-SIG : 1-4 Select QTDV_XXX in tune mode PTT : ON Deviation meter filter HPF : OFF LPF : 3kHz De-emphasis : OFF		Panel	MIN					±0.75kHz	±0.05kHz
13. DQT deviation	1) CH-SIG : 1-6 Select DQDV_XXX in tune mode PTT : ON Deviation meter filter HPF : OFF LPF : 3kHz De-emphasis : OFF		±0.75kHz	±0.05kHz						
14. DTMF deviation	1) CH-SIG : 1-8 Select DTDV_XXX in tune mode PTT : ON Deviation meter filter HPF : OFF LPF : 15kHz De-emphasis : OFF		±3.0kHz	±0.1kHz						
15. MSK deviation	1) CH-SIG : 1-9 Select MSDV_XXX in tune mode PTT : ON Deviation meter filter HPF : OFF LPF : 15kHz De-emphasis : OFF		±3.0kHz	±0.1kHz						
16. Sensitivity	1) Select __L SENS_XXX in tune mode SSG output : -116dBm/0.35μV AF output : 1V/4Ω		SSG AF VTVM Distortion meter Oscilloscope 4Ω dummy load	Rear					ANT	Panel
	2) Select __C SENS_XXX in tune mode			EXT.SP		Center check				
	3) Select __H SENS_XXX in tune mode					High check				

ADJUSTMENT

Item	Condition	Measurement			Adjustment			Specifications/Remarks
		Test-equipment	Unit	Terminal	Unit	Parts	Method	
17. Squelch tight point	1) CH-SIG : 1-1 Select SQ_T_XXX in tune mode SSG output : Value when 6dB is added from the sensitivity value of 12dB SINAD. Up/down knob : Set the NB on	SSG AF VTVM Distortion meter Oscilloscope 4Ω dummy load	Rear	ANT EXT.SP	Panel	PF3 key PF4 key	Adjust to point of opening squelch	Set the value to 255. Adjust the SSG output to "Condition". Then, decrease the value to the point of opening the squelch.
18. Squelch open point	1) CH-SIG : 1-1 Select SQ_O_XXX in tune mode SSG output : Value when 3dB is subtracted from the sensitivity value of 12dB SINAD. Up/down knob : Set the NB on							
	2) SSG output : OFF						Check	Squelch must be closed.
19. NB	1) Output : -109dBm/0.8μV Pulse generator Output : 0.5Vp-p/50Ω Cycle : 100μsec Pulse width : 10ns Up/down knob : Set the NB on	SSG Pluse generator Distortion meter Oscilloscope AF VTVM	Rear	ANT EXT.SP			Check	SINAD 12dB or more.

WIRING

SPECIFICATIONS

GENERAL

Frequency Range	K : 29.7~37.0MHz	K2 : 35.0~43.0MHz	K3 : 40.0~50.0MHz
Number of Channels	160 channels		
Channel Spacing	20kHz (PLL channel step : 5kHz)		
Operating Voltage	13.4V DC±15% negative ground		
Current Drain	0.6A on standby 2.2A on receive 25A on transmit		
Duty Cycle	Transmit 20%		
Frequency Stability	±0.0005% (-30°C to +60°C)		
Operating Temperature Range	-30°C to +60°C (-22°F to +140°F)		
Dimensions & Weight	7.01" (178mm) W x 2.36" (60mm) H x 12.88" (327mm) D, 7.92lbs (3.6kg)		

RECEIVER (Measurements made per EIA standard EIA/TIA-240-D)

Antenna Impedance	50Ω		
Sensitivity	12dB SINAD : 0.25μV, 20dB Quieting : 0.35μV		
Selectivity	85dB		
Intermodulation	80dB		
Spurious and Image Rejection	90dB		
Audio Output	13W at 4Ω less than 5% distortion (12W at 4Ω less than 3% distortion)		
Band Spread	K : 7.3MHz	K2 : 8.0MHz	K3 : 10.0MHz

TRANSMITTER (Measurements made per EIA standard EIA-152-C)

RF Power Output	110W adjustable to 45W		
Antenna Impedance	50Ω		
Spurious Response	80dB		
Type of Emission	16K0F3E		
FM Hum and Noise	55dB		
Microphone Impedance	600Ω		
Audio Distortion	Less than 2% at 1000Hz		
Band Spread	K : 7.3MHz	K2 : 8.0MHz	K3 : 10.0MHz

KENWOOD follows a policy of continuous advancement in development. For this reason, specifications may be changed without notice.
